## Contents

### Highlights of This Issue 1401

#### REVIEW

1403  
**Cancer-Associated Fibroblasts Drive the Progression of Metastasis through both Paracrine and Mechanical Pressure on Cancer Tissue**  
George S. Karagiannis, Theofilos Poutahidis, Susan E. Erdman, Richard Kirsch, Robert H. Riddell, and Eleftherios P. Diamandis

1473  
**Roles of Estrogen Receptor and p21\(^{\text{Waf1}}\) in Bortezomib-Induced Growth Inhibition in Human Breast Cancer Cells**  
Marie Maynadier, Jingxue Shi, Ophélie Vaillant, Magali Gary-Bobo, Ilaria Basile, Michel Gleizes, Anne-Marie Cathiard, Jonathan Lee Tin Wah, M. Saeed Sheikh, and Marcel Garcia

#### ANGIOGENESIS, METASTASIS, AND THE CELLULAR MICROENVIRONMENT

1419  
**The Lymphotactin Receptor Is Expressed in Epithelial Ovarian Carcinoma and Contributes to Cell Migration and Proliferation**  
Mijung Kim, Lisa Rooper, Jia Xie, Jamie Rayahin, Joanna E. Burdette, Andre A. Kajdacsy-Balla, and Maria V. Barbolina

1430  
**Anti–IL-20 Monoclonal Antibody Alleviates Inflammation in Oral Cancer and Suppresses Tumor Growth**  
Yu-Hsiang Hsu, Chi-Chen Wei, Dar-Bin Shieh, Chien-Hui Chan, and Ming-Shi Chang

#### CANCER GENES AND GENOMICS

1440  
**Functional Effects of GRM1 Suppression in Human Melanoma Cells**  
Janet Wangari-Talbot, Brian A. Wall, James S. Goydos, and Suzie Chen

#### CELL CYCLE, CELL DEATH, AND SENESCENCE

1451  
**Multiple Isoforms of CDC25 Oppose ATM Activity to Maintain Cell Proliferation during Vertebrate Development**  
Daniel Verduzco, Jennifer Shepard Dovey, Abhay A. Shukla, Elisabeth Kodym, Brian A. Skang, and James F. Amatruda

### SIGNALING AND REGULATION

1496  
**The Hedgehog Receptor Patched Functions in Multidrug Transport and Chemotherapy Resistance**  
Michel Bidet, Amandine Tomico, Patrick Martin, Hélène Guizouarn, Patrick Mollat, and Isabelle Mua-Veteau

### CORRECTION

1509  
**Correction: The Proteasome Activator PA200 Regulates Tumor Cell Responsiveness to Glutamine and Resistance to Ionizing Radiation**  

ABOUT THE COVER

Chemokine receptors play a role in cell proliferation, migration, adhesion, as well as homing of tumor cells to their metastatic niches. A member of the chemokine family of receptor proteins, lymphotactin (XCR1), is expressed in primary and metastatic epithelial ovarian carcinoma and supports XCL1/2-induced tumor cell migration and proliferation and formation of metastasis on diaphragm and peritoneal wall. Using immunofluorescence it was demonstrated that ovarian carcinoma cell lines express XCR1. For details, see the article by Kim et al. on page 1419.
