# Highlights of This Issue 965

## REVIEW

### 967

**The Role of Inflammatory Pathways in Cancer-Associated Cachexia and Radiation Resistance**

Aaron Laine, Puneeth Iyengar, and Tej K. Pandita

---

## DNA DAMAGE AND REPAIR

### 1040

**Epithelial-Specific Deletion of 11β-HSD2 Hinders Apcmin/+ Mouse Tumorigenesis**

Li Jiang, Shilin Yang, Huiyong Yin, Xiaofeng Fan, Sunan Wang, Bing Yao, Ambra Pozzi, Xiaoping Chen, Raymond C. Harris, and Ming-Zhi Zhang

---

## GENOMICS

### 1051

**Tumor Suppressor Functions of miR-133a in Colorectal Cancer**

Yujuan Dong, Junhong Zhao, Chung-Wah Wu, Lijing Zhang, Xiaodong Liu, Wei Kang, Wing-Wah Leung, Ning Zhang, Francis K.L. Chan, Joseph J.Y. Sung, Simon S.M. Ng, and Jun Yu

---

## ONCOGENES AND TUMOR SUPPRESSORS

### 1072

**HDAC6 and SIRT2 Regulate the Acetylation State and Oncogenic Activity of Mutant K-RAS**

Moon Hee Yang, Gaëlle Laurent, Alexandra S. Bause, Robert Spang, Natalie German, Marcia C. Haigis, and Kevin M. Haigis

### 1078

**Snail Cooperates with Kras<sup>12D</sup> to Promote Pancreatic Fibrosis**

Mario A. Shields, Karumi Elshin, Vaibhav Sahai, Krishan Kumar, Kulsumjehan Siddiqui, Rosa F. Hwang, Paul J. Grippo, and Hidayatullah G. Munshi
Residual Prostate Cancer Cells after Docetaxel Therapy Increase the Tumorigenic Potential via Constitutive Signaling of CXCR4, ERK1/2 and c-Myc
Koji Hatano, Souhei Yamaguchi, Keisuke Nimura, Kouki Murakami, Akira Nagahara, Kazutoshi Fujita, Motohide Uemura, Yasutomo Nakai, Mutsumi Tsuchiya, Masashi Nakayama, Norio Nonomura, and Yasufumi Kaneda

AURKA Governs Self-Renewal Capacity in Glioma-Initiating Cells via Stabilization/Activation of β-catenin/Wnt Signaling
Zhibo Xia, Ping Wei, Heng Zhang, Zhiming Ding, Lixuan Yang, Zhengsong Huang, and Nu Zhang

MET and ERBB2 Are Coexpressed in ERBB2⁺ Breast Cancer and Contribute to Innate Resistance

ABOUT THE COVER
The image shows axial abdominal computed tomography (CT) scans from the proband of a family in which multiple individuals were affected by kidney cancer. This family was found to have a germline mutation in the gene encoding the nuclear deubiquitinase BAP1 (BRCA1-associated protein-1). Following resection of the right kidney for cancer, the patient developed multifocal tumors in the left kidney, as shown in the four panels. At the age of 46, he underwent the first of three left partial nephrectomies for the surgical removal of two high-grade clear cell renal carcinomas measuring 3 cm and 1.5 cm, respectively, and a 2-cm atypical cyst with clear cell lining. For details, see the article by Farley and colleagues on page 1061.
