### ABOUT THE COVER

Tuberous sclerosis complex (TSC) is associated with hamartomas in several organs in patients, including the brain, kidneys, heart, and skin. The cover shows hematoxylin and eosin staining of a paw section from an 8-week-old wild-type mouse. At the same age, Tsc1cc DARPP Cre mouse displays paw lesions with multiple hemangiosarcomas. Please see the article by Leech and colleagues (beginning on page 548) for more information.
