

Highlights of This Issue 359
REVIEW

- 361**  **Revisiting Seed and Soil: Examining the Primary Tumor and Cancer Cell Foraging in Metastasis**
Amber E. de Groot, Sounak Roy, Joel S. Brown, Kenneth J. Pienta, and Sarah R. Amend

CELL CYCLE AND SENEESCENCE

- 371** **A Systematic Analysis of Negative Growth Control Implicates the DREAM Complex in Cancer Cell Dormancy**
James MacDonald, Yudith Ramos-Valdes, Pirunthan Perampalam, Larissa Litovchick, Gabriel E. DiMattia, and Frederick A. Dick

CELL DEATH AND SURVIVAL

- 382** **A Genome-Wide Loss-of-Function Screen Identifies SLC26A2 as a Novel Mediator of TRAIL Resistance**
Lina Y. Dimberg, Christina G. Towers, Kian Behbakht, Taylor J. Hotz, Jihye Kim, Susan Fosmire, Christopher C. Porter, Aik-Choon Tan, Andrew Thorburn, and Heide L. Ford
- 395** **TNF Signaling through RIP1 Kinase Enhances SN38-Induced Death in Colon Adenocarcinoma**
Lucia Cabal-Hierro and Peter J. O'Dwyer

CHROMATIN, EPIGENETICS, AND RNA REGULATION

- 405** **EZH2 or HDAC1 Inhibition Reverses Multiple Myeloma-Induced Epigenetic Suppression of Osteoblast Differentiation**
Juraj Adamik, Shunqian Jin, Quanhong Sun, Peng Zhang, Kurt R. Weiss, Judith L. Anderson, Rebecca Silbermann, G. David Roodman, and Deborah L. Galson

DNA DAMAGE AND REPAIR

- 418** **14-3-3 σ Contributes to Radioresistance By Regulating DNA Repair and Cell Cycle via PARP1 and CHK2**
Yifan Chen, Zhaomin Li, Zizheng Dong, Jenny Beebe, Ke Yang, Liwu Fu, and Jian-Ting Zhang

GENOMICS

- 429**  **Immunophenotyping and Transcriptomic Outcomes in PDX-Derived TNBC Tissue**
Eileen Snowden, Warren Porter, Friedrich Hahn, Mitchell Ferguson, Frances Tong, Joel S. Parker, Aaron Middlebrook, Smita Ghanekar, W. Shannon Dillmore, and Rainer Blaesius

METABOLISM

- 439**  **Metabolic Profiling in Formalin-Fixed and Paraffin-Embedded Prostate Cancer Tissues**
Stefano Cacciatore, Giorgia Zadra, Clyde Bango, Kathryn L. Penney, Svitlana Tyekucheva, Oscar Yanes, and Massimo Loda

ONCOGENES AND TUMOR SUPPRESSORS

- 448** **miR-211-5p Suppresses Metastatic Behavior by Targeting SNAI1 in Renal Cancer**
Kefeng Wang, Wei Jin, Peng Jin, Xiang Fei, Xia Wang, and Xiaonan Chen
- 457** **Bone Microenvironment Changes in Latexin Expression Promote Chemoresistance**
Mi Zhang, Mary Osisami, Jinlu Dai, Jill M. Keller, June Escara-Wilke, Atsushi Mizokami, and Evan T. Keller
- 467** **Inflammatory Molecule, PSGL-1, Deficiency Activates Macrophages to Promote Colorectal Cancer Growth through NF κ B Signaling**
Jiangchao Li, Zeqi Zhou, Xiaohan Zhang, Li Zheng, Dan He, Yuxiang Ye, Qian-Qian Zhang, Cui-Ling Qi, Xiao-Dong He, Chen Yu, Chun-kui Shao, Liang Qiao, and Lijing Wang

Table of Contents

SIGNAL TRANSDUCTION

- 478** Potent EMT and CSC Phenotypes Are Induced By Oncostatin-M in Pancreatic Cancer
Jacob M. Smigiel, Neetha Parameswaran, and Mark W. Jackson

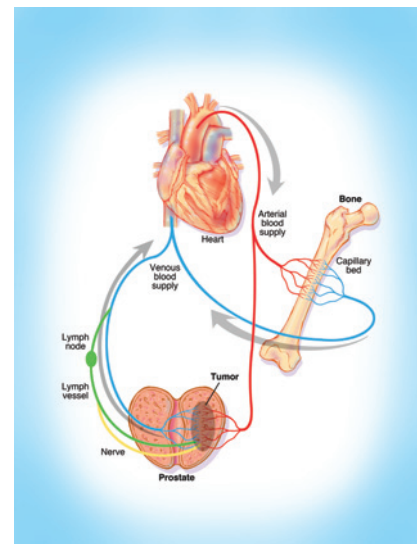

- 489** IGF-1 Receptor Modulates FoxO1-Mediated Tamoxifen Response in Breast Cancer Cells
Ali Vaziri-Gohar, Yan Zheng, and Kevin D. Houston

ABOUT THE COVER

Prostate cancer metastasis requires cancer cells to exit the primary tumor in the prostate, survive transit through the heart and lungs, enter the arterial circulation, and establish a tumor within the metastatic site. The initial dissemination of cancer cells from the primary tumor occurs via three routes: venous blood vessels (blue), lymph vessels (green), or nerves (orange). All disseminated cells eventually enter the arterial blood supply where they are carried throughout the body to secondary sites, such as the bone, and extravasate from the blood vessel to colonize the metastatic site. Understanding the selective pressures inherent to these routes to primary tumor dissemination to a metastatic site is essential for understanding the mechanism of cancer spread and will lead to more effective methods of metastasis prevention. Please see the article by de Groot and colleagues (beginning on page 361) for more information.
