# Table of Contents

## Highlights of This Issue 633

### REVIEW

635  
Cancer Immunotherapy: Whence and Whither  
Peter J. Stambrook, John Maher, and Faznin Fazanneh

### CELL CYCLE AND SENESCENCE

651  
The E3 Ligase CHIP Mediates p21 Degradation to Maintain Radioresistance  
Kuntal Biswas, Sukumar Sarkar, Kangping Du, David L. Brautigan, Tarek Abbas, and James M. Larner

### CELL DEATH AND SURVIVAL

660  
CDK4/6 Therapeutic Intervention and Viable Alternative to Taxanes in CRPC  

670  
Dual Targeting of Mesenchymal and Amoeboid Motility Hinders Metastatic Behavior  
Brandon C. Jones, Laura C. Kelley, Yuriy V. Loskutov, Kristina M. Marinak, Varvara K. Kozyreva, Matthew B. Smolkin, and Elena N. Pugacheva

### GENOMICS

683  
Expression Profiling of Circulating Microvesicles Reveals Intercellular Transmission of Oncogenic Pathways  
Gloria Milani, Tobia Lana, Silvia Bresolin, Sanja Aveic, Anna Pastò, Chiara Frasson, and Geertny Hte Kronsie

696  
CRISPR Knockout of the HuR Gene Causes a Xenograft Lethal Phenotype  

## ONCOGENES AND TUMOR SUPPRESSORS

708  
Chromosome 20q Amplification Defines a Subtype of Microsatellite Stable, Left-Sided Colon Cancers with Wild-type RAS/RAF and Better Overall Survival  
Ryan N. Ptashkin, Carlos Pagan, Rona Yaeger, Sumit Middha, Jinru Shia, Kevin P. O’Rourke, Michael F. Berger, Lu Wang, Robert Cima, Jiaxing Wang, David S. Klimstra, Leonard Saltz, Marc Ladanyi, Ahnet Zehir, and Jaclyn F. Hechtman

714  
Atorvastatin Decreases HBx-Induced Phospho-Akt in Hepatocytes via P2X Receptors  
Aram Ghalali, Javier Martin-Renedo, Johan Hogberg, and Ulla Stenius

723  
Hypoxia Selectively Enhances Integrin α5β1 Receptor Expression in Breast Cancer to Promote Metastasis  

735  
The Cytidine Deaminase APOBEC3 Family Is Subject to Transcriptional Regulation by p53  
Daniel Menendez, Thuy-Ai Nguyen, Joyce Snipe, and Michael A. Resnick

## SIGNAL TRANSDUCTION

744  
Pancreatic Neuroendocrine Tumors and EMT Behavior Are Driven by the CSC Marker DCLK1  
Yu Ikezono, Hironori Koga, Jun Akiba, Mitsuhiko Abe, Takafumi Yoshida, Fumitaka Wada, Tom Nakamura, Hideki Iwamoto, Atsukata Musada, Takahiko Sakae, Hiroshi Yano, Osamu Tsuruta, and Takuji Torimura

753  
Phosphatidylinerse Sensing by TAM Receptors Regulates AKT-Dependent Chemoresistance and PD-L1 Expression  
Canan Kasikara, Sushil Kumar, Stanley Kimmian, Wen-Tsou, Ke Geng, Viral Kumar Davra, Kanapathy Siriam, Connor Devoe, Khanh-Duy N. Nguyen, Anita Antes, Allen Krantz, Grzegorz Rymarczyk, Andzej Wilczynski, Cyril Empig, Bruce Freimark, Michael Gray, Kyle Schlenegger, Jeff Hutchins, Sergio V. Kotenko, and Raymond B. Birge
ABOUT THE COVER

Circulating microvesicles (MVs) have emerged as having important (patho)physiological roles in cell-to-cell communication. In cancers, tumor-derived MVs can include information that is potentially oncogenic. In plasma of leukemia patients, circulating MVs were shown to carry leukemia-specific fusion transcripts and gene expression analysis revealed that cargo of MVs derived from leukemia cells encloses oncogenic fusion transcripts and mRNA related to basic functions of leukemic cells. The cover image shows MVs isolated from K562 leukemia cell culture internalized in the cytoplasm of mesenchymal stem cells (MSCs) 1 hour after co-culture with MVs. K562 derived MVs were stained with red dye PHK26+; β-tubulin is depicted in green and nuclei are stained in blue. Co-culture experiments further showed that MVs released from leukemia cells enhance proliferation of MSCs. Please see the article by Milani et al. (beginning on page 683) for more information.
