Highlights of This Issue 633

REVIEW

635 Cancer Immunotherapy: Whence and Whither
Peter J. Stambrook, John Maher, and Fazzin Fazzaneh

CELL CYCLE AND SENESCENCE

651 The E3 Ligase CHIP Mediates p21 Degradation to Maintain Radioresistance
Kuntal Biswas, Sukumar Sarkar, Kangping Du, David L. Brautigan, Tarek Abbas, and James M. Larner

CELL DEATH AND SURVIVAL

660 CDK4/6 Therapeutic Intervention and Viable Alternative to Taxanes in CRPC

670 Dual Targeting of Mesenchymal and Amoeboid Motility Hinders Metastatic Behavior
Brandon C. Jones, Laura C. Kelley, Yurii V. Loskutov, Kristina M. Marinak, Varvara K. Kozyreva, Matthew B. Smolkin, and Elena N. Pugacheva

GENOMICS

683 Expression Profiling of Circulating Microvesicles Reveals Intercellular Transmission of Oncogenic Pathways
Gloria Milani, Tobia Lana, Silvia Bresolin, Sanja Aveic, Anna Pastob, Chiara Frasson, and Geertuyt te Kronnie

696 CRISPR Knockout of the HuR Gene Causes a Xenograft Lethal Phenotype

ONCOGENES AND TUMOR SUPPRESSORS

708 Chromosome 20q Amplification Defines a Subtype of Microsatellite Stable, Left-Sided Colon Cancers with Wild-type RAS/RAF and Better Overall Survival
Ryan N. Ptashkin, Carlos Pagan, Rona Yaeger, Sumit Middha, Jinru Shia, Kevin P. O’Rourke, Michael F. Berger, Lu Wang, Robert Câmara, Jiajing Wang, David S. Klimstra, Leonard Saltz, Marc Ladanyi, Ahmet Zehir, and Jaclyn F. Hechtman

714 Atorvastatin Decreases HBx-Induced Phospho-Akt in Hepatocytes via PKA Receptors
Aram Ghalali, Javier Martin-Renedo, Johan Högbom, and Ulla Stenius

723 Hypoxia Selectively Enhances Integrin α5β1 Receptor Expression in Breast Cancer to Promote Metastasis

735 The Cytidine Deaminase APOBEC3 Family Is Subject to Transcriptional Regulation by p53
Daniel Menendez, Thuy-Ai Nguyen, Joyce Snipe, and Michael A. Resnick

SIGNAL TRANSDUCTION

744 Pancreatic Neuroendocrine Tumors and EMT Behavior Are Driven by the CSC Marker DCLK1
Yu Ikezono, Hironori Koga, Jun Akiba, Mitsuhiko Abe, Takafumi Yoshida, Fumitaka Wada, Toru Nakamura, Hideki Ishimoto, Atsutaka Masuda, Takahiko Sakaue, Hiroshi Yano, Osamu Tsuruta, and Takuji Torigura

753 Phosphatidylinositol Sensing by TAM Receptors Regulates AKT-Dependent Chemoresistance and PD-L1 Expression
Canan Kasikara, Sushil Kumar, Stanley Kimani, Wen-I Tsou, Keng, Viral Kumar Davra, Pananathy Siram, Connor Devoe, Khanh-Quynh N. Nguyen, Ania Antes, Allen Krantz, Grzegorz Bymarczek, Andraz Wilczynski, Cyril Empig, Bruce Freimuth, Michael Gray, Kyle Schlunegger, Jeff Hutchins, Sergei V. Kotenko, and Raymond B. Birge
Circulating microvesicles (MVs) have emerged as having important (patho)physiological roles in cell-to-cell communication. In cancers, tumor-derived MVs can include information that is potentially oncogenic. In plasma of leukemia patients, circulating MVs were shown to carry leukemia specific fusion transcripts and gene expression analysis revealed that cargo of MVs derived from leukemia cells encloses oncogenic fusion transcripts and mRNA related to basic functions of leukemic cells. The cover image shows MVs isolated from K562 leukemia cell culture internalized in the cytoplasm of mesenchymal stem cells (MSCs) 1 hour after co-culture with MVs. K562 derived MVs were stained with red dye PHK26+, ßtubulin is depicted in green and nuclei are stained in blue. Co-culture experiments further showed that MVs released from leukemia cells enhance proliferation of MSCs. Please see the article by Milani et al. (beginning on page 683) for more information.
