# Molecular Cancer Research

## Table of Contents

**Highlights of This Issue** 633

### REVIEW

635  
Cancer Immunotherapy: Whence and Whither  
Peter J. Stambrook, John Maher, and Fazinn Fazanleh

### CELL CYCLE AND SENESCENCE

651  
The E3 Ligase CHIP Mediates p21 Degradation to Maintain Radioresistance  
Kuntal Biswas, Sukumar Sarkar, Kangping Du, David L. Brautigan, Tarek Abbas, and James M. Larner

### CELL DEATH AND SURVIVAL

660  
CDK4/6 Therapeutic Intervention and Viable Alternative to Taxanes in CRPC  

### GENOMICS

683  
Expression Profiling of Circulating Microvesicles Reveals Intercellular Transmission of Oncogenic Pathways  
Glória Milani, Tobia Lana, Silvia Bresolin, Sanja Aveic, Anna Pastò, Chiara Frasson, and Geertruy te Kronnie

### SIGNAL TRANSDUCTION

708  
Chromosome 20q Amplification Defines a Subtype of Microsatellite Stable, Left-Sided Colon Cancers with Wild-type RAS/RAF and Better Overall Survival  
Ryan N. Ptasinski, Carlos Pagan, Rona Yaeger, Sumit Middha, Jinru Shia, Kevin P. O’Rourke, Michael F. Berger, Lu Wang, Robert Câmara, Jiajing Wang, David S. Klimstra, Leonard Saltz, Marc Ladanyi, Ahnem Zehir, and Jaclyn F. Hechtman

714  
Atorvastatin Decreases HBx-Induced Phospho-Akt in Hepatocytes via P2X Receptors  
Aram Ghalali, Javier Martín-Renedo, Johan Högborg, and Ulla Stenius

723  
Hypoxia Selectively Enhances Integrin $\alpha_5\beta_1$ Receptor Expression in Breast Cancer to Promote Metastasis  
Julia A. Ju, Ines Godet, I Chae Ye, Jungmin Byun, Hasini Jayatilaka, Sun Joo Lee, Lisha Xiang, Debangsu Samanta, Meng Hong Lee, Pei-Hsun Wu, Denis Wirtz, Gregg L. Semenza, and Daniele M. Gilkes

735  
The Cytidine Deaminase APOBEC3 Family Is Subject to Transcriptional Regulation by p53  
Daniel Menendez, Thuy-Ai Nguyen, Joyce Snipe, and Michael A. Resnick

744  
Pancreatic Neuroendocrine Tumors and EMT Behavior Are Driven by the CSC Marker DCLK1  
Yu Ikezono, Hironori Roga, Jun Akiba, Mitsuhiko Abe, Takafuli Yoshida, Fumitaka Wada, Toru Nakamura, Hideki Iwamoto, Atsutaka Maruda, Takahiko Sakau, Hirohsa Yano, Osamu Tsuruta, and Takuji Tatsubara

753  
Phosphatidylyserine Sensing by TAM Receptors Regulates AKT-Dependent Chemoresistance and PD-L1 Expression  
ABOUT THE COVER

Circulating microvesicles (MVs) have emerged as having important (patho)physiological roles in cell-to-cell communication. In cancers, tumor-derived MVs can include information that is potentially oncogenic. In plasma of leukemia patients, circulating MVs were shown to carry leukemia specific fusion transcripts and gene expression analysis revealed that cargo of MVs derived from leukemia cells encloses oncogenic fusion transcripts and mRNA related to basic functions of leukemic cells. The cover image shows MVs isolated from K562 leukemia cell culture internalized in the cytoplasm of mesenchymal stem cells (MSCs) 1 hour after co-culture with MVs. K562 derived MVs were stained with red dye PHK26+, βtubilin is depicted in green and nuclei are stained in blue. Co-culture experiments further showed that MVs released from leukemia cells enhance proliferation of MSCs. Please see the article by Milani et al. (beginning on page 683) for more information.
