About the Cover
Invasive growth into the surrounding mesenchyme is a hallmark of tumor malignancy and is a key step in the metastatic process. The cover art identifies PTEN-knockout prostate epithelial cells (e-cadherin, green) invading through the basement membrane (collagen IV, red) in response to stromal expression of the cytokine interleukin-6. This suggests that signaling molecules commonly associated with the pro-inflammatory tumor microenvironment can synergize with existing oncogenes to promote tumor progression.
