Highlights of This Issue  965

REVIEW
967  Tailoring Peptidomimetics for Targeting Protein–Protein Interactions

CELL CYCLE AND SENESCENCE
979  Activating BRAF and PIK3CA Mutations Cooperate to Promote Anaplastic Thyroid Carcinogenesis
Roch-Philippe Charles, Jillian Silva, Gioia Iezza, Wayne A. Phillips, and Martin McMahon

CELL DEATH AND SURVIVAL
987  PI3K and Bcl-2 Inhibition Primes Glioblastoma Cells to Apoptosis through Downregulation of Mcl-1 and Phospho-BAD
Fresia Pareja, David Macleod, Chang Shu, John F. Crary, Peter D. Canoll, Alonzo H. Ross, and Markus D. Siegelin

CHROMATIN, GENE, AND RNA REGULATION
1002  Differential Expression of Stress and Immune Response Pathway Transcripts and miRNAs in Normal Human Endothelial Cells Subjected to Fractionated or Single-Dose Radiation
Sanjeeewani T. Palayoor, Molykutty John-Aryankalayil, Adeola Y. Makinde, Michael T. Faludo, Scott R. Magnuson, and C. Norman Coleman

DNA DAMAGE AND REPAIR
1016  Hypoxic Stress Facilitates Acute Activation and Chronic Downregulation of Fanconi Anemia Proteins
Susan E. Scanlon and Peter M. Glazer

GENOMICS
1029  Transcriptomes and shRNA Suppressors in a TP53 Allele–Specific Model of Early-Onset Colon Cancer in African Americans
Charles C. Wei, Marc R. Birtwistle, Himel Mallick, Nengjun Yi, Zuzana Berrong, Emily Cloessner, Keely Duff, Josephine Tidwell, Megan Clemenning, Brent Wolkerson, Christopher Farrell, Fred Bunz, Hao Ji, Michael Shutzman, Kim E. Creek, Carolyn E. Banister, and Phillip J. Buckhaults

ONCOGENES AND TUMOR SUPRESSORS
1042  FGFR3 Translocations in Bladder Cancer: Differential Sensitivity to HSP90 Inhibition Based on Drug Metabolism
Jaime Acquaviva, Suqin He, Chaohua Zhang, John-Paul Jimenez, Masazumi Nagai, Jim Sang, Manuel Sequeira, Donald L. Smith, Luisa Shin Ogawa, Takayo Inoue, Noriaki Tatsuta, Margaret A. Knowles, Richard C. Bates, and David A. Proia

SIGNAL TRANSDUCTION
1055  Evaluating TBK1 as a Therapeutic Target in Cancers with Activated IRF3

ABOUT THE COVER

Immunofluorescence picture (200×) of a murine papillary thyroid carcinoma stained for galectin-3 (green) and DAPI (blue). This mouse model, developed in the McMahon Lab at the University of California, San Francisco by R.-P. Charles using the cre-activable gene Braf<sup>CA</sup> mutant mouse coupled with a thyroid-specific cre-recombinase (Thyro-cre<sup>ERT2</sup>), mimics closely the human pathology (e.g., galectin-3 expression). This preclinical model is invaluable for further studies using pathway-targeted drug treatments but also for uncovering the genetics behind tumor progression to anaplastic thyroid carcinoma by combining additional genomic alterations like Pten<sup>del</sup> or Ptch1 deletion. See the article by Charles and colleagues (beginning on page 979) for more information.
