

**Highlights of This Issue 1067****REVIEW**

- 1069** **Transcriptional Roles of PARP1 in Cancer**  
 Matthew J. Schiewer and Karen E. Knudsen

*MCR* **RapidIMPACT**

- 1081** **The lncRNA *PCAT29* Inhibits Oncogenic Phenotypes in Prostate Cancer**  
 Rohit Malik, Lalit Patel, John R. Prensner, Yang Shi, Matthew K. Iyer, Shruthi Subramaniyan, Alexander Carley, Yashar S. Niknafs, Anirban Sahu, Sumin Han, Teng Ma, Meilan Liu, Irfan A. Asangani, Xiaojun Jing, Xuhong Cao, Saravana M. Dhanasekaran, Dan R. Robinson, Felix Y. Feng, and Arul M. Chinnaiyan

**CELL CYCLE AND SENESCENCE**

- 1088** **Cooperativity of E-cadherin and Smad4 Loss to Promote Diffuse-Type Gastric Adenocarcinoma and Metastasis**  
 Jun Won Park, Seok Hoon Jang, Dong Min Park, Na Jung Lim, Chuxia Deng, Dae Yong Kim, Jeffrey E. Green, and Hark Kyun Kim

**CELL DEATH AND SURVIVAL**

- 1100** **Autocrine VEGF/VEGFR1 Signaling in a Subpopulation of Cells Associates with Aggressive Osteosarcoma**  
 Tetsuro Ohba, Justin M.M. Cates, Heather A. Cole, David A. Slosky, Hiroataka Haro, Takashi Ando, Herbert S. Schwartz, and Jonathan G. Schoenecker

**CHROMATIN, GENE, AND RNA REGULATION**

- 1112** **Prognostic Potential of DNA Methylation and Transcript Levels of HIF1A and EPAS1 in Colorectal Cancer**  
 Agnieszka Anna Rawluszko-Wieczorek, Karolina Horbacka, Piotr Krokowicz, Matthew Misztal, and Paweł Piotr Jagodziński

**DNA DAMAGE AND REPAIR**

- 1128** **Base Excision Repair Defects Invoke Hypersensitivity to PARP Inhibition**  
 Julie K. Horton, Donna F. Stefanick, Rajendra Prasad, Natalie R. Gassman, Padmini S. Kedar, and Samuel H. Wilson

**GENOMICS**

- 1140** **Convergent and Divergent Cellular Responses by ErbB4 Isoforms in Mammary Epithelial Cells**  
 Vikram B. Wali, Jonathan W. Haskins, Maureen Gilmore-Hebert, James T. Platt, Zongzhi Liu, and David F. Stern

**ONCOGENES AND TUMOR SUPPRESSORS**

- 1156** **Conserved Oncogenic Behavior of the FAM83 Family Regulates MAPK Signaling in Human Cancer**  
 Rocky Cipriano, Kristy L.S. Miskimen, Benjamin L. Bryson, Chase R. Foy, Courtney A. Bartel, and Mark W. Jackson

**SIGNAL TRANSDUCTION**

- 1166** **VDR Activity Is Differentially Affected by Hic-5 in Prostate Cancer and Stromal Cells**  
 Joshua D. Solomon, Marjet D. Heitzer, Teresa T. Liu, Jan H. Beumer, Robert A. Parise, Daniel P. Normolle, Damien A. Leach, Grant Buchanan, and Donald B. DeFranco
- 1181** **VDR Status Arbitrates the Prometastatic Effects of Tumor-Associated Macrophages**  
 Yan Zhang, Quanjun Guo, Zhujun Zhang, Nan Bai, Ze Liu, Min Xiong, Yuquan Wei, Rong Xiang, and Xiaoyue Tan

## ABOUT THE COVER

Osteosarcoma is the most common primary bone malignancy in children and young adults and accounts for over 50% of primary skeletal malignancies. Previous reports have demonstrated that expression of VEGF/VEGF-R1 in human osteosarcoma is associated with an aggressive clinical course. Angiographies of K7M3 osteosarcoma-injected murine tibias immunoselected for either VEGF-R1-low expression (Low) or VEGF-R1-high expression (High) compared to contralateral limb (Control) demonstrate that high levels of VEGF-R1 are associated with increased tumor growth and tumor angiogenesis. These results strongly suggest that autocrine VEGF-R1 signaling in a relatively small subpopulation of tumor plays a pivotal role in osteosarcoma progression. These findings may lead to improved stratification of high-risk osteosarcoma and novel strategies for anti-neoplastic therapy based on the inhibition of angiogenesis in this specific tumor type. For more information, see the article by Ohba and colleagues, beginning on page 1100 in this issue.
