ABOUT THE COVER

Dual hybrid ^{18}F -fluorodeoxyglucose (FDG) microPET/CT imaging was performed on transgenic mice with *Apc* and *Pik3ca*-mutant intestinal adenocarcinomas. These mice were imaged before and following 14 days of treatment with the dual PI3K/mTOR inhibitors BEZ235 and LY3023414. These images demonstrated reductions in the total tumor volume and avidity in those mice treated with agents. Please see the article by Foley and colleagues (beginning on page 317) for more information.
