MOLECULAR CANCER RESEARCH

TABLE OF CONTENTS

HIGHLIGHTS
799  Selected Articles from This Issue

REVIEW
801  Convergent Evolution, Evolving Evolvability, and the Origins of Lethal Cancer
Kenneth J. Pienta, Emma U. Hammarlund, Robert Axelrod, Sarah R. Amend, and Joel S. Brown

CANCER GENES AND NETWORKS
811  TCF21 Promotes Luminal-Like Differentiation and Suppresses Metastasis in Bladder Cancer

822  PIK3CA and p53 Mutations Promote 4NQO-Initiated Head and Neck Tumor Progression and Metastasis in Mice
Dario García-Carracedo, Yi Cai, Wanglong Qiu, Kiyoshi Saei, Richard A. Friedman, Andrew Lee, Yinglu Li, Elizabeth M. Goldber, Elias E. Stratikopoulos, Ramon Parsons, Chao Lu, Argiris Efstratiadis, Elizabeth M. Philipone, Angela J. Yoon, and Gloria H. Su

CANCER "-OMICS"
835  Inactivation of NF1 Promotes Resistance to EGFR Inhibition in KRAS/NRAS/BRAF-mut Wild-Type Colorectal Cancer
Alexandros Georgiou, Adam Stewart, David Cunningham, Udai Banerji, and Steven R. Whittaker

CELL FATE DECISIONS
847  Heat Shock Protein 47 Maintains Cancer Cell Growth by Inhibiting the Unfolded Protein Response Transducer IRE1α
Akihiro Yoneda, Kaori Sakai-Sawada, Kenjiro Minomi, and Yasuaki Tamura

859  Destruction of a Microtubule-Bound MYC Reservoir during Mitosis Contributes to Vincristine’s Anticancer Activity

GENOME MAINTENANCE
873  Ku80-Targeted pH-Sensitive Peptide–PNA Conjugates Are Tumor Selective and Sensitize Cancer Cells to Ionizing Radiation
Alanna R. Kaplan, Ha Pham, Yanfeng Liu, Stanley Oyaghire, Raman Bahal, Donald M. Engelman, and Peter M. Glazer

METABOLISM
883  Metabolic Profiling of Formalin-Fixed Paraffin-Embedded Tissues Discriminates Normal Colon from Colorectal Cancer
Kota Arima, Mai Chan Lau, Melissa Zhao, Koichiro Haruki, Keisuke Kosumi, Kosuke Mima, Mancang Gu, Juha P. Väyrynen, Tyler S. Twombly, Yoshifumi Baba, Kenji Fujiiyoshi, Junko Kishikawa, Chunguang Guo, Hideo Baba, William G. Richards, Andrew T. Chan, Reiko Nishihara, Jeffrey A. Meyerhardt, Jonathan A. Nowak, Marius Giannakis, Charles S. Fuchs, and Shuji Ogino

NEW HORIZONS IN CANCER BIOLOGY
891  Kinetics of Nuclear Uptake and Site-Specific DNA Cleavage during CRISPR-Directed Gene Editing in Solid Tumor Cells
Kelly Banas, Natalia Rivera-Torres, Pawel Bialk, Byung-Chun Yoo, and Eric B. Knisey

### ABOUT THE COVER

Following the genesis of a cancer clade within the host, tumor cells rapidly undergo divergent evolution to form multiple cancer species. Evolvability itself is one trait produced in this initial expansion and “speciation” event, lending cancer cells the capacity to adapt to changing environmental stimuli and selection pressures. The cover depicts the natural history of a cancer, from establishment of the initial malignant cell through speciation and “extinction events” as successive rounds of therapy are applied. In their review, Pienta and colleagues argue that the acquisition of evolvability and lethality are examples of convergent evolution that occur in all lethal cancers. These events precede any exposure to therapy, and thus render highly evolvable tumor species that are inherently resistant to therapy by virtue of their adaptability. The authors argue that the future of clinical cancer management must account for this early event in the natural history of cancer and adapt to it in order to more effectively impede the progression of lethal disease. For more information, please see the article on page 801. (Illustrations: Tim Phelps ©2019 JHU AAM; Department of Art as Applied to Medicine; The Johns Hopkins University School of Medicine).
