## TABLE OF CONTENTS

### HIGHLIGHTS

**933** Selected Articles from This Issue

### REVIEW

**935** Exosomes in Breast Cancer – Mechanisms of Action and Clinical Potential  
Tiantong Liu, Jagmohan Hooda, Jennifer M. Atkinson, Theresa L. Whiteside, Steffi Oesterreich, and Adrian V. Lee

### PERSPECTIVE

**946** A Parathyroid–Gut Axis: Hypercalcemia and the Pathogenesis of Gastrinoma in Multiple Endocrine Neoplasia 1  
Wenzel M. Hackeng, Koen M.A. Dreijerink, G. Johan A. Offerhaus, and Lodewijk A.A. Brosens

### mcRapidIMPACT

**950** Radiomics Biomarkers Correlate with CD8 Expression and Predict Immune Signatures in Melanoma Patients  

### CANCER GENES AND NETWORKS

**957** Proteomic Analysis of Src Family Kinase Phosphorylation States in Cancer Cells Suggests Deregulation of the Unique Domain  
Ana Ruiz-Saenz, Farima Zahedi, Elliott Peterson, Ashley Yoo, Courtney A. Dreyer, Danislav S. Spassov, Juan Oses-Prieto, Alma Burlingame, and Mark M. Moasser

**968** L-Plastin Promotes Gastric Cancer Growth and Metastasis in a Helicobacter pylori cagA-ERK-SP1-Dependent Manner  
Yong-Sheng Teng, Wan-Yan Chen, Zong-Bao Yan, Yi-Pin Lv, Yu-Gang Liu, Fang-Yuan Mao, Yong-Liang Zhao, Liu-Sheng Peng, Ping Cheng, Mu-Bing Duan, Weisan Chen, Yu Wang, Ping Luo, Quan-Ming Zou, Jun Chen, and Yuan Zhuang

### CANCER “-OMICS”

**979** Loss of 9p21 Regulatory Hub Promotes Kidney Cancer Progression by Upregulating HOXB13  
Maria Francesca Baietti, Peihua Zhao, Jonathan Crowther, Raj Nayan Sewduth, Linde De Troyer, Maria Debie-Rychter, and Anna A. Sablina

**991** Meta-Analysis and Systematic Review of the Genomics of Mucosal Melanoma  
Natasa Broit, Peter A. Johansson, Chloe B. Rodgers, Sebastian T. Walpole, Felicity Newell, Nicholas K. Hayward, and Antonia L. Pritchard

### CELL FATE DECISIONS

**1005** The Hippo Pathway Effector YAP Promotes Ferroptosis via the E3 Ligase SKP2  
Wen-Hsuan Yang, Chao-Chieh Lin, Jianli Wu, Pei-Ya Chao, Kuan Chen, Po-Han Chen, and Jen-Tsan Chi

### GENOME MAINTENANCE

**1015** Comprehensive Mutational Analysis of the BRCA1-Associated DNA Helicase and Tumor-Suppressor FANCJ/BACH1/BRIP1  
Jennifer A. Calvo, Briana Fritchman, Desiree Hernandez, Nicole S. Persky, Cory M. Johannessen, Federica Piccioni, Brian A. Kelch, and Sharon B. Cantor
NEW HORIZONS IN CANCER BIOLOGY

Development and Characterization of Novel Endoxifen-Resistant Breast Cancer Cell Lines Highlight Numerous Differences from Tamoxifen-Resistant Models
Calley J. Jones, Malayannan Subramaniam, Michael J. Emch, Elizabeth S. Bruinsma, James N. Ingle, Matthew P. Goetz, and John R. Hawse

Circulating Tumor Cell Genomic Evolution and Hormone Therapy Outcomes in Men with Metastatic Castration-Resistant Prostate Cancer
Santosh Gupta, Susan Halabi, Gabor Kemeny, Monika Anand, Paraskevi Giannakakou, David M. Nanus, Daniel J. George, Simon G. Gregory, and Andrew J. Armstrong

SIGNAL TRANSDUCTION AND FUNCTIONAL IMAGING

Paracrine Placental Growth Factor Signaling in Response to Ionizing Radiation Is p53-Dependent and Contributes to Radioreistance
Tamara Kazimova, Fabienne Tschanz, Ashish Sharma, Irma Telarovic, Marco Wachtel, Gloria Pedot, Beat Schafer, and Martin Pruschy

RAF-Mutant Melanomas Differentially Depend on ERK2 Over ERK1 to Support Aberrant MAPK Pathway Activation and Cell Proliferation
Matthew S. Crowe, Tatiana Zavorotinskaya, Charles F. Voliva, Matthew D. Shirley, Yanqun Wang, David A. Ruddy, Daniel P. Rakiec, Jeffery A. Engelman, Darrin D. Stuart, and Alyson K. Freeman

EDITOR’S NOTE

Editor’s Note: Focal Adhesion Kinase Controls Aggressive Phenotype of Androgen-Independent Prostate Cancer

ABOUT THE COVER

Pathological assessment of the tumor-immune microenvironment is a key step in the development of a therapeutic approach for metastatic melanoma, which can respond to targeted therapy or immune checkpoint blockade depending on the specific features of the tumor. However, biopsy of metastatic lesions is invasive, and the localization of metastatic lesions to difficult-to-access sites complicates the sampling process. The cover depicts multiplex immunofluorescence of a melanoma biopsy (PD-L2/FITC in green, PD-L1/Cy3 in yellow, CD4/Cy5 in red, and CD8/Cy7 in purple). In their report, Aoude and colleagues demonstrate a novel radiomics approach to reliably qualify the molecular features of melanoma metastases normally assessed by biopsy, demonstrating that PET/CT imaging markers correlate with known biomarkers of patient response to targeted therapy and immune checkpoint blockade. The authors argue that this approach presents a noninvasive and cost-effective method to establish prognoses for metastatic melanoma patients. For more information, see the article on page 950.
