### TABLE OF CONTENTS

#### HIGHLIGHTS

1097  Selected Articles from This Issue

#### CANCER GENES AND NETWORKS

1099  **Kinetic Characterization of ASXL1/2-Mediated Allosteric Regulation of the BAP1 Deubiquitinase**

1113  **TAGLN Is Downregulated by TRAF6-Mediated Proteasomal Degradation in Prostate Cancer Cells**

Fuping Wen, Xiaochen Sun, Chenxia Sun, Zhenyang Dong, Gaozhen Jia, Wei Bao, Haolan Yu, and Chenghua Yang

1123  **MAP3K7 Loss Drives Enhanced Androgen Signaling and Independently Confers Risk of Recurrence in Prostate Cancer with Joint Loss of CHD1**

1137  **NF-kB Blockade with Oral Administration of Dimethylaminoparthenolide (DMAPT), Delays Prostate Cancer Resistance to Androgen Receptor (AR) Inhibition and Inhibits AR Variants**

Katherine L. Morel, Anis A. Hamid, John G. Clohessy, Nicole Pandell, Leigh Ellis, and Christopher J. Sweeney

#### CANCER “-OMICS”

1146  **Comprehensive Molecular Profiling of Desmoplastic Small Round Cell Tumor**

#### CELL FATE DECISIONS

1156  **AP-2α Regulates S-Phase and Is a Marker for Sensitivity to PI3K Inhibitor Buparlisib in Colon Cancer**

Anna C. Beck, Edward Cho, Jeffrey R. White, Lily Paemka, Tiandao Li, Vivian W. Gu, Dakota T. Thompson, Kelsey E. Koch, Christopher Franke, Matthew Gosse, Vincent T. Wu, Shannon R. Landers, Anthony J. Pammatnat, Mikhail V. Kulak, and Ronald J. Weigel

1168  **Deubiquitinase UCHL1 Maintains Protein Homeostasis through the PSMA7–APEH–Proteasome Axis in High-grade Serous Ovarian Carcinoma**

Apoorva Tangri, Kinzie Lighty, Jagadish Loganathan, Fahmi Mesmar, Ram Podicheti, Chi Zhang, Marcin Iwanicki, Ronny Drapkin, Harikrishna Nakshatri, and Sumegha Mitra

#### METABOLISM

1182  **EWS-FLI1 and Menin Converge to Regulate ATF4 Activity in Ewing Sarcoma**

Jennifer A. Jiménez, April A. Apfelbaum, Allegra Hawkins, Laurie K. Svoboda, Abhijay Kumar, Ramon Ocadiz Ruiz, Alessandra X. Garcia, Elena Haarer, Zeribe C. Nwosu, Joshua Bradin, Trupta Purohit, Dong Chen, Tomasz Cierpiki, Jolanta Greimbecka, Costas A. Lyssiotis, and Elizabeth R. Lawlor

### ABOUT THE COVER

High-grade serous ovarian cancer (HGSOC) originates from fallopian tube lesions called serous tubal intraepithelial carcinoma (STIC). The presence of identical TP53 mutations in STIC and the concurrent HGSOC establish a clonal relationship between the two lesions. The cover image depicts the immunohistochemical staining of the deubiquitinase Ubiquitin Carboxyl-terminal Hydrolase L1 (UCHL1) in a section of human STIC. UCHL1 expression (brown) was high in the regions with strong p53 nuclear staining in the STIC-associated invasive carcinoma. In this issue, Tangri and colleagues demonstrated that UCHL1 levels correlate with p53 levels, tumor grade, and poor prognosis in human HGSOC. The authors further demonstrated that epigenetic upregulation of UCHL1 in HGSOC maintains protein homeostasis and promotes metastatic growth. For more information, see the article on the page 1168.
