

Supplementary Figure 4: Effect of β -catenin silencing on mammosphere formation in suspension culture. The parental (Par), the control shRNA (Con), and the β -catenin shRNA (β sh1 and β sh2) cells derived from the MDA-MB231 and the MDA-MD468 cells were seeded in suspension culture as described in the materials and methods. Pictures were taken with 10 \times objective under IX-71 Olympus microscope.
